

Sensever®

Self powered hot pipe alert.

- » Environmentally friendly
- » No hazardous materials
- » Sustainable - no batteries
- » Long lifetime - { 20 years }
- » Electrical temperature monitoring
- » Small in size - ø30mm x 50mm
- » Hygienic and waterproof

TEGNOLOGY
Thermo Electric Energy

Sensever® is easily installed on any pipe which could cause injury due to its extreme heat. A light and/or optional wireless signal is emitted when the pipe temperature exceeds the programmable preset threshold, alerting that the pipe is hot.

No battery or power supply of any form is needed, as Sensever®'s power is harvested from the heat of the pipe by thermo-electric generation. Making it sustainable and long lasting without maintenance.

Sensever® is environmentally friendly and free of hazardous materials. It is well suited for places where heat insulation is not possible and where the hygienic requirement is high.
